| 2  | Remarks   |
|----|---|
| 3  | Examiner Venhl is thanked for the thorough Office Action.                       |
| 4  |   |
| 5  |   |
| 6  | In the Specification  |
| 7  | The specification has been reviewed and amendments made to correct              |
| 8  | typographical and editorial errors. No new matter has been added.               |
| 9  | In the Claims   |
| 10 | A marked up version/copy of amended claims in attached at the back.             |
| 11 | Claim objections and amendments   |
| 12 | Claims 1, 11 and 19 are amended as kindly suggested by the examiner.            |
| 13 | Claims 4, 12, 13 and 20, 21 are amended to delete "medium".                     |
| 14 | Note that all amendments to the claims are for clarification purposes and not   |
| 15 | in response to prior art rejections.  |
| 16 | Claims 2, 3, and 12 are canceled.   |
| 17 | Claim 9 is amended to add the limitations of claim 4.                           |
| 18 | Claim 11 is added to clarify that the etch forms a first opening. See Fig 2 and |
| 19 | 4.  |
| 20 | Claim 14 is amended to depend from claim 11.                                    |
| 21 | Claim 18 is amended to add the limitations of claim 13.                         |
| 22 | Claim 19 is added to clarify that the etch forms a first opening. See Fig 2 and |
| 23 | 4.  |
| 24 | Claim 26 is amended to correct a typo.  |
| 25 | New claims 27 – 29 are added.   |
| 26 | No new matter is added.   |

| 1  |   |  |
|----|---|--|
| 2  | <b>CLAIM REJECTIONS:</b>  |  |
| 3  |   |  |
| 4  | Rejection Of Claims 1, 5, 6, 8 and 10 Under 35 U.S.C. § 102(e) as being anticipated by Ye   |  |
| 5  | et al. al.  The rejection of claims 1, 5, 6 8 and 10 Under 35 U.S.C. § 102(e) as being  |  |
| 7  | anticipated by Ye et al. al. is acknowledged. Reconsideration and withdrawal of the rejection is  |  |
| 8  | respectfully requested in view of the amendments  |  |
| 9  | Amended claim 1 is non-obvious  |  |
| 10 | Amended claim 1, step (c)(1) limits the invention to a NH <sub>3</sub> and CO or O <sub>2</sub>   |  |
| 11 | gasses.   |  |
| 12 | The Office Action dated 9/9/2002, posits that Ye suggest this. However, Ye  |  |
| 13 | teaches away from the claim 1 step c1's NH <sub>3</sub> and CO or O <sub>2</sub> etch gas by teaching (1) (See Ye,                            |  |
| 14 | col. 12, line 20-21) a $O_2$ and $N_2$ alpha FC layer etch. Secondly, Ye teaches (2) a (See Ye col. 22,                                       |  |
| 15 | lines 41-42, ) a NH <sub>3</sub> only etch of FLARE TM low K layer. There is no suggestion to modify  |  |
| 16 | Ye's 2 separate etches/embodiments. Therefore Ye teaches away from amended claim 1 step C1.   |  |
| 17 |   |  |
| 18 | Claims 5, 8 and 10 are non-obvious  |  |
| 19 | Claims 5, 8 and 10 are non-obvious over the cited art because they depend   |  |
| 20 | from non-obvious amended claim 1.   |  |
| 21 | Rejection of claims 11, 14, 15 and 17 under 35 U.S.C. § 102e as being anticipated by Ye et  |  |
| 22 | <u>al.</u>  |  |
| 23 | The rejection of claims 11, 14, 15 and 17 under 35 U.S.C. § 102e as being   |  |
| 24 | anticipated by Ye et al. is acknowledged. Reconsideration and withdrawal of the rejection is  |  |
| 25 | respectfully requested in view of the amendments.   |  |
| 26 | Amended parent Claim 11, step (c) claims etch gases of "NH <sub>3</sub> and H <sub>2</sub> etch   |  |
| 27 | gasses and flowing O2 or CO gasses. "   |  |
| 28 | The Office Action p. 4 cites Ye et al. in 2 instances (col. 12, L 20-21 and col.  |  |
| 29 | 222, lines 41-42) as suggesting using claim 11's etch gases of NH <sub>3</sub> and H <sub>2</sub> etch gasses and                             |  |
| 30 | flowing O2 or CO gasses. " . However, Ye teaches away from the claim 11 step c1's NH3 and   |  |
| 31 | H <sub>2</sub> , and CO or O <sub>2</sub> etch gas by teaching (1) (See Ye, col. 12, line 20-21) a O <sub>2</sub> and N <sub>2</sub> alpha FC |  |
| 32 | layer etch. Secondly, Ye teaches (2) (See Ye col. 22, lines 41-42, ) a NH <sub>3</sub> only etch of FLARE                                     |  |

| 1  | TM low K layer. There is no suggestion to modify Ye's 2 separate etches/embodiments.                      |  |  |
|----|---|--|--|
| 2  | Therefore Ye teaches away from amended claim 11 step C1.  |  |  |
| 3  |   |  |  |
| 4  |   |  |  |
| 5  | Claims 14 15 and 17   |  |  |
| 6  | Claims 14 15 and 17 depend from non-obvious amended claim 11.   |  |  |
| 7  |   |  |  |
| 8  | Rejection of claims 2-4 and 12-13 under 35 U.S.C. § 103 as being unpatentable over Ye et                  |  |  |
| 9  | al. and Bhardwag et al.   |  |  |
| 10 |   |  |  |
| 11 | The rejection of claims 2-4 and 12-13 under 35 U.S.C. § 103 as being                                      |  |  |
| 12 | unpatentable over Ye et al. and Bhardwag et al. is acknowledged. Reconsideration and                      |  |  |
| 13 | withdrawal of the rejection is respectfully requested in view of the amendments.                          |  |  |
| 14 |   |  |  |
| 15 | Claims 2 and 3 are canceled.  |  |  |
| 16 | Dependant Claim 4 contains specific result dependent parameters for the etch.                             |  |  |
| 17 | These parameters are not suggested by the prior art. No other cited reference suggests that adding        |  |  |
| 18 | CO or O <sub>2</sub> will reduce that polymer buildup and reduce sidewall bowing. See spec. p. 8, section |  |  |
| 19 | D. Also, Claim 4 specifies a "medium plasma power" that is not suggested by the references.               |  |  |
| 20 | See Spec. p. 9 Section E.   |  |  |
| 21 |   |  |  |
| 22 | Claim 12 is canceled.   |  |  |
| 23 | Dependent claim 13 is non-obvious.  |  |  |
| 24 | Dependent claim 13 is non-obvious. Dependant Claim 12 contains specific                                   |  |  |
| 25 | result dependent parameters for the etch. These parameters are not suggested by the prior art. No         |  |  |
| 26 | other cited reference suggests that adding CO or O2 will reduce that polymer buildup and reduce           |  |  |
| 27 | sidewall bowing. See spec. p. 8, section D. Also, Claim 13 specifies a "medium plasma power"              |  |  |
| 28 | that is not suggested by the references. See Spec. p. 9 Section E.  |  |  |
| 29 |   |  |  |
| 30 |   |  |  |
| 31 | Rejection of claims 7 and 16  |  |  |

| 1           | Claims 7 and 16 depend from non-obvious parent claims as discussed above.  |  |  |
|-------------|--|--|--|
| 2           | Rejection of claims 9 and 18   |  |  |
| 3           | Amended claims 9 and 18 are non-obvious for the reasons discussed above for  |  |  |
| 4           | their respective parent claims. Moreover, claim 9 and 18 claim the exact process that create                                 |  |  |
| 5           | straight walled openings.  |  |  |
| 6           |  |  |  |
| 7<br>8<br>9 | Rejection of claims 19 22-24 and 25 under 35 U.S.C. § 103a as being unpatentable voer Ye and Ngo                             |  |  |
| 10          | The rejection of claims 19 22-24 and 25 under 35 U.S.C. § 103a as being  |  |  |
| 11          | unpatentable over Ye and Ngo is acknowledged. Reconsideration and withdrawal of the rejection                                |  |  |
| 12          | is respectfully requested in view of the amendments.   |  |  |
| 13          |  |  |  |
| 14          | Parent claim 19 step c1, claims an etch with only NH <sub>3</sub> and N <sub>2</sub> etch gasses.                            |  |  |
| 15          |  |  |  |
| 16          | The combination of Ye et al. and Ngo et al. is improper.   |  |  |
| 17          | The combination of Ye et al. and Ngo et al. is improper for the purpose cited  |  |  |
| 18          | in the Office Action because neither reference suggests they be combined and this can be only                                |  |  |
| 19          | done by hindsight.   |  |  |
| 20          | Even if combined Ye and Ngo do not met claim 19.   |  |  |
| 21          | Even if combined Ye and Ngo do not met claim 19 step c1. Yu col 22, lines  |  |  |
| 22          | 39 to 42 teaches a NH <sub>3</sub> only etch. This teaches away from claim 19's only NH <sub>3</sub> and N <sub>2</sub> etch |  |  |
| 23          | gasses.  |  |  |
| 24          | In contrast to amended claim 19's "etch process to etch said organic low k   |  |  |
| 25          | dielectric layer through said opening to form a first opening using said masking pattern as an                               |  |  |
| 26          | etch mask; Ngo col. 4, lines 40-42 does not form a first opening. In contrast, Ngo only performs                             |  |  |
| 27          | a "plasma treatment" See col. 4, lins 40 to 49; See col. 4, lines 5 -20. Ngo is a different step,                            |  |  |
| 28          | previous step, forms an opening. See Ngo col. 5, lines 37 – 40.  |  |  |
| 29          | Therefore, it is improper to cite Ngo as an etch step. Furthermore, Ngo does   |  |  |
| 30          | not met or suggest claim 19's etch step or chemistry.  |  |  |
| 31          |  |  |  |

| I  | Rejection of claims 20-21   |  |  |
|----|---|--|--|
| 2  |   |  |  |
| 3  | The rejection of claims 20-21 is acknowledged. Claim 20 depends from non-                             |  |  |
| 4  | obvious parent claim 19 as discussed above. Claim 20 claims non-obvious parameters.                   |  |  |
| 5  | Claim 21 contains non-obvious parameters.   |  |  |
| 6  | Combination of Ye and Bhardwaj is improper.   |  |  |
| 7  | The combination of Ye and Bhardwaj is improper. The combination of Ye                                 |  |  |
| 8  | and Bhardwai can only be done by hindsight. There is no suggestion to combine the references.         |  |  |
| 9  | The references teach incompatible processes and teach away from each other. The point                 |  |  |
| 10 | Bhardwai is cited for, increasing the etch rate by varying every process parameter, is not            |  |  |
| 11 | related to the invention's object to increase the etch rate and straightness of the vertical walls of |  |  |
| 12 | the opening. See spec. p. 12 lines 12 and claim 9.  |  |  |
| 13 | Therefore, claims 20-21 are non-obvious.  |  |  |
| 14 | Rejection of claim 26   |  |  |
| 15 | Rejection of claim 26 is acknowledged. Reconsideration and withdrawal of                              |  |  |
| 16 | the rejection is respectfully requested in view of the amendments.                                    |  |  |
| 17 | Claim 26 depends form a non-obvious parent claim and is non-obvious.                                  |  |  |
| 18 |   |  |  |
| 19 | Furthermore, the combination of reference is improper because there is no-                            |  |  |
| 20 | motivation to combine than and they can only be combined by hindsight. Moreover,                      |  |  |
| 21 | McReynolds teaches a total unrelated etch process of different material, different gases and          |  |  |
| 22 | different results.  |  |  |
| 23 |   |  |  |
| 24 |   |  |  |
| 25 | New claims 27 and 28 are non-obvious  |  |  |
| 26 | New claims 27 and 28 claim and etch with flowing NH <sub>3</sub> and N <sub>2</sub> etch gasses       |  |  |
| 27 | and flowing CO or O2 gasses. These are non-obvious for the reasons stated above.                      |  |  |
| 28 |   |  |  |
| 29 |   |  |  |
| 30 |   |  |  |

| 1  |  |
|----|--|
| 2  | CONCLUSION   |
| 3  | In conclusion, reconsideration and withdrawal of the rejections are                            |
| 4  | respectfully requested. Allowance of all claims is requested. Issuance of the application is   |
| 5  | requested.   |
| 6  | It is requested that the Examiner telephone the undersigned attorney George                    |
| 7  | Saile at (845) 452-5863 should there be anyway that we could help to place this Application in |
| 8  | condition for Allowance.   |
| 9  | Respectfully submitted,  |
| 10 |  |
| 11 | 973  |

| 1<br>2 | Version with markings to show changes  Claims with amendments are shown marked up to shown amendments.      |  |  |
|--------|---|--|--|
| 3      | Claims not amended are not marked up.   |  |  |
| 4      |   |  |  |
| 5      | 1. (Amended) A method of fabrication of etching a low -k dielectric layer used in                           |  |  |
| 6      | microelectronics fabrication; comprising the steps of :   |  |  |
| 7      | a) forming an organic low k dielectric layer over a substrate;  |  |  |
| 8      | b) forming a masking pattern over said organic low k dielectric layer; said                                 |  |  |
| 9      | masking pattern having an opening;  |  |  |
| 10     | c) using an etch process to etch said organic low k dielectric layer through said                           |  |  |
| 11     | opening to form a first opening using said resist pattern as an etch mask; said etch                        |  |  |
| 12     | process comprising:   |  |  |
| 13     | (1) in a first step, etching said organic low k dielectric layer by applying a plasma                       |  |  |
| 14     | power and flowing at least NH <sub>3</sub> gas and flowing CO or O <sub>2</sub> gasses.                     |  |  |
| 15     | cancel claim 2  |  |  |
| 16     |   |  |  |
| 17     | Cancel claim 3  |  |  |
| 18     | 4. (Amended) The method of claim 1 wherein said first step comprises applying a [medium]                    |  |  |
| 19     | plasma power plasma density between 1E9 and 1E11 cm <sup>-3</sup> and flowing [only] NH <sub>3</sub> gas, a |  |  |
| 20     | power in between 500 and 1500 W, and a NH3 flow between 50 and 300 sccm and a pressure                      |  |  |
| 21     | between 80 and 800 mTorr and flowing CO or O2 gasses.   |  |  |
| 22     | 5. The method of claim 1 wherein said organic low k dielectric is comprised of a material                   |  |  |
| 23     | selected from the group consisting of fluorinated arylether, Benzocyclobuthene (BCB),                       |  |  |
| 24     | amorphous teflon, carbon doped oxides, poly arylene ether (PAE) and organic Spin on                         |  |  |
| 25     | materials.  |  |  |
| 26     | 6. The method of claim 1 wherein said organic low k dielectric is comprised of a material                   |  |  |
| 27     | selected from the group consisting of fluorinated arylether, and poly arylene ether.                        |  |  |
| 28     | 7. The method of claim 1 wherein said organic low k dielectric is comprised of carbon doped                 |  |  |
| 29     | oxide.  |  |  |
| 30     | 8. The method of claim 1 wherein said organic low k dielectric is comprised of poly arylene                 |  |  |
| 31     | ether (PAE).  |  |  |

| 1        | 9. (Amended) The method of claim 1 wherein said etch forms [a] said first opening through said                                |  |  |
|----------|---|--|--|
| 2        | organic low k dielectric layer; said first opening having sidewalls defined by said organic low                               |  |  |
| 3        | k dielectric layer; said sidewalls are substantially vertical at a angle between 87 and 93                                    |  |  |
| 4        | degrees to the surface of the substrate; and said first step comprises applying a [medium]                                    |  |  |
| 5        | plasma power plasma density between 1E9 and 1E11 cm <sup>-3</sup> and flowing NH <sub>3</sub> gas, a power in                 |  |  |
| 6        | between 500 and 1500 W, and a NH <sub>3</sub> flow between 50 and 300 sccm and a pressure between                             |  |  |
| 7        | 80 and 800 mTorr and flowing CO or O <sub>2</sub> gasses.   |  |  |
| 8        |   |  |  |
| 9        | 10. The method of Claim 1 wherein the substrate is selected from the group consisting of:                                     |  |  |
| 10       | microelectronics conductor materials; microelectronics semiconductor materials; and   |  |  |
| 11       | microelectronics dielectric materials.  |  |  |
| 12<br>13 | 11. (AMENDED) A method of fabrication of etching a low -k dielectric layer, comprising the                                    |  |  |
| 14       | steps of:   |  |  |
| 15       | a) forming an organic low k dielectric layer over an insulation layer over a  |  |  |
| 16       | substrate;  |  |  |
| 17       | b) forming a masking pattern over said organic low k dielectric layer; said   |  |  |
| 18       | masking pattern having an opening;  |  |  |
| 19       | c) using an etch process to etch said organic low k dielectric layer through said   |  |  |
| 20       | opening to form a first opening using said masking pattern as an etch mask; said etch   |  |  |
| 21       | process comprising:   |  |  |
| 22       | (1) in a first step, etching said organic low k dielectric layer by applying a plasma   |  |  |
| 23       | power and flowing $NH_3$ and $H_2$ etch gasses and flowing $O_2$ or $CO$ gasses.  |  |  |
| 24       |   |  |  |
| 25       | cancel claim 12   |  |  |
| 26       |   |  |  |
| 27       | 13. (Amended) The method of claim 11 wherein said first step comprises:   |  |  |
| 28       | a plasma power between 500 and 1500 W, [medium] plasma power plasma   |  |  |
| 29       | density between 1E9 and 1E11 cm <sup>-3</sup> , a NH <sub>3</sub> flow between 50 and 300 sccm, a H <sub>2</sub> flow between |  |  |
| 30       | 50 and 300 sccm and a pressure between 80 and 800 mTorr and flowing O2 or CO gasses.  |  |  |

| 1  | 14. (Amended) The method of claim [1] 11 wherein said organic low k dielectric is comprised                                  |  |  |  |
|----|--|--|--|--|
| 2  | of a material selected from the group consisting of fluorinated arylether, Benzocyclobuthene                                 |  |  |  |
| 3  | (BCB), amorphous teflon, carbon doped oxides, poly arylene ether (PAE) and organic Spin or                                   |  |  |  |
| 4  | materials.   |  |  |  |
| 5  | 15. The method of claim 11 wherein said organic low k dielectric is comprised of a material                                  |  |  |  |
| 6  | selected from the group consisting of fluorinated arylether, and poly arylene ether.   |  |  |  |
| 7  | 16. The method of claim 11 wherein said organic low k dielectric is comprised of carbon doped                                |  |  |  |
| 8  | oxide.   |  |  |  |
| 9  | 17. The method of claim 11 wherein said organic low k dielectric is comprised of poly arylene                                |  |  |  |
| 10 | ether (PAE).   |  |  |  |
| 11 | 18. (Amended) The method of claim 11 wherein said etch forms [a] said first opening through                                  |  |  |  |
| 12 | said organic low k dielectric layer; said first opening having sidewalls defined by said organic                             |  |  |  |
| 13 | low k dielectric layer; said sidewalls are substantially vertical at a angle between 87 and 93                               |  |  |  |
| 14 | degrees to the surface of the substrate; and said first step comprises:  |  |  |  |
| 15 | a plasma power between 500 and 1500 W, plasma power plasma density   |  |  |  |
| 16 | between 1E9 and 1E11 cm <sup>-3</sup> , a NH <sub>3</sub> flow between 50 and 300 sccm, a H <sub>2</sub> flow between 50 and |  |  |  |
| 17 | 300 sccm and a pressure between 80 and 800 mTorr and flowing O2 or CO gasses.  |  |  |  |
| 18 | 19. (Amended) A method of fabrication of etching a low -k dielectric layer; comprising the                                   |  |  |  |
| 19 | steps of:  |  |  |  |
| 20 | a) forming an organic low k dielectric layer over a insulation layer over a  |  |  |  |
| 21 | ' substrate;   |  |  |  |
| 22 | b) forming a masking pattern over said organic low k dielectric layer; said  |  |  |  |
| 23 | masking pattern having an opening;   |  |  |  |
| 24 | c) using an etch process to etch said organic low k dielectric layer through said  |  |  |  |
| 25 | opening to form a first opening using said masking pattern as an etch mask; said etch  |  |  |  |
| 26 | process comprising:  |  |  |  |
|    | (1) in a final standard said and the said said and the said said and the said said said said said said said said             |  |  |  |
| 27 | (1) in a first step, etching said organic low k dielectric layer by applying a plasma  |  |  |  |
| 28 | power and flowing only NH <sub>3</sub> and N <sub>2</sub> etch gasses.   |  |  |  |
| 29 |  |  |  |  |

| l  | 20. (Amended) The method of claim 19 wherein said first step comprises:   |  |  |  |
|----|---|--|--|--|
| 2  | power in between 500 and 1500 W, [medium] plasma power plasma density   |  |  |  |
| 3  | between 1E9 and 1E11 cm <sup>-3</sup> , a NH <sub>3</sub> flow between 50 and 300 sccm and a N <sub>2</sub> flow between 50 |  |  |  |
| 4  | and 300 sccm and a pressure between 80 and 800 mTorr.   |  |  |  |
| 5  | 21. (Amended) The method of claim 19 wherein said first step comprises:   |  |  |  |
| 6  | power in between 500 and 1500 W, [medium] plasma power plasma density   |  |  |  |
| 7  | between 1E9 and 1E11 cm <sup>-3</sup> , a NH <sub>3</sub> flow between 50 and 300 sccm and a N <sub>2</sub> flow between 50 |  |  |  |
| 8  | and 300 sccm and a pressure between 80 and 800 mTorr and flowing CO or O2 gasses.   |  |  |  |
| 9  |   |  |  |  |
| 10 | 22. The method of claim 19 wherein said organic low k dielectric is comprised of a material                                 |  |  |  |
| 11 | selected from the group consisting of fluorinated arylether, Benzocyclobuthene (BCB),                                       |  |  |  |
| 12 | amorphous teflon, carbon doped oxides, poly arylene ether (PAE) and organic Spin on   |  |  |  |
| 13 | materials.  |  |  |  |
| 14 | 23. The method of claim 19 wherein said organic low k dielectric is comprised of a material                                 |  |  |  |
| 15 | selected from the group consisting of fluorinated arylether, and poly arylene ether.  |  |  |  |
| 16 | 24. The method of claim 19 wherein said organic low k dielectric is comprised of carbon doped                               |  |  |  |
| 17 | oxide.  |  |  |  |
| 18 | 25. The method of claim 19 wherein said organic low k dielectric is comprised of poly arylene                               |  |  |  |
| 19 | ether (PAE).  |  |  |  |
| 20 | 26. (Amended) The method of claim 19 wherein said etch forms [an] said first opening  |  |  |  |
| 21 | through said organic low k dielectric layer; said first opening having sidewalls defined by said                            |  |  |  |
| 22 | organic low k dielectric layer; said sidewalls are substantially vertical at a angle between 87                             |  |  |  |
| 23 | and 93 degrees to the surface of the substrate.   |  |  |  |
| 24 |   |  |  |  |
| 25 | Please add new claims as follows  |  |  |  |
| 26 | A method of fabrication of etching a low -k dielectric layer; comprising the steps of:                                      |  |  |  |
| 27 | a) forming an organic low k dielectric layer over a insulation layer over a   |  |  |  |
| 28 | substrate; said organic low k dielectric is comprised of a material selected from the                                       |  |  |  |
| 29 | group consisting of fluorinated arylether, Benzocyclobuthene, amorphous teflon,   |  |  |  |
| 30 | carbon doped oxides, and organic Spin on materials.   |  |  |  |

## Docket T00-240 S/N 09/769,812

| 1  | b)  | forming a masking pattern over said organic low k dielectric layer; said   |  |  |
|----|---|--|--|--|
| 2  | m   | asking pattern having an opening;  |  |  |
| 3  | c)  | using an etch process to etch said organic low k dielectric layer through said                                   |  |  |
| 4  | oj  | pening to form a first opening_using said masking pattern as an etch mask; said etch                             |  |  |
| 5  | pı  | rocess comprising:   |  |  |
| 6  |   | (1) in a first step, etching said organic low k dielectric layer by applying a plasma                            |  |  |
| 7  | power and flowing NH3 and N2 etch gasses and flowing CO or O2 gasses.                 |  |  |  |
| 8  |   |  |  |  |
| 9  | 28. The meth  | od of claim 27 wherein said first step comprises:  |  |  |
| 10 |   | power in between 500 and 1500 W, plasma power plasma density between   |  |  |
| 11 | 1E9 and 1E11  | $$ cm $^{-3}$ , a NH $_3$ flow between 50 and 300 sccm and a N $_2$ flow between 50 and 300                      |  |  |
| 12 | sccm and a pressure between 80 and 800 mTorr and flowing CO or O <sub>2</sub> gasses. |  |  |  |
| 13 | 29. The method of claim 27 wherein said first step comprises:                         |  |  |  |
| 14 |   | power in between 500 and 1500 W, plasma power plasma density between   |  |  |
| 15 | 1E9 and 1E11  | $\mbox{cm}^{\mbox{-}3},$ a $\mbox{NH}_3$ flow between 50 and 300 sccm and a $\mbox{N}_2$ flow between 50 and 300 |  |  |
| 16 | scem and a pr   | essure between 80 and 800 mTorr and flowing CO or O <sub>2</sub> gasses; and                                     |  |  |
| 17 |   | said etch forms said first opening through said organic low k dielectric layer;                                  |  |  |
| 18 | said first open   | ing having sidewalls defined by said organic low k dielectric layer; said sidewalls                              |  |  |
| 19 | are substantial   | ly vertical at a angle between 87 and 93 degrees to the surface of the substrate.                                |  |  |
| 20 |   |  |  |  |
|    |   |  |  |  |
